

AEROLINK

Introducing The Aerolink AL 3.0 from Fitness Audio® - a Bluetooth® Receiver that links your Bluetooth® enabled smartphone, tablet, or computer to your sound system.

No messy cables, broken dock connectors or finding a suitable input on a confusing sound system. Just link to it and play your music - it's that simple. The Aerolink comes with a full Rack Mount Kit to secure it in the audio rack and will easily connect to your sound system just like any CD player. Once in place, never worry about cables, docks, or confusing inputs again.

How does it work?

Connect the Aerolink into your sound system just like you would a CD player. Turn it on, press the blue Link button on the front of the AL 3.0, go to the Bluetooth settings on your phone, tablet, or computer and click 'discoverable', choose Aerolink (1-5) and that is it! You are now linked up and ready to play any audio playlist from your device. When you are finished, just cancel the Link button or walk away - distance will disengage the pairing. Press the blue link button again to reset the pairing.

Quick Look:

- Single Push Button Pairing
- Unique ID's allow up to 5 units to be used in one venue, at the same time.
- Stereo RCA and Single TRS 1/4 Mono Outputs
- Rack Mount Kit included
- Join the Aerolink to a Fitness Audio U Series Receiver using the Joiner Plate supplied with every Receiver for a single 19" Rack Space
- Supplied with a DC Power Split Jack - Y cable to share power with a Fitness Audio Receiver. A 12v Powerpack is also available as an extra.
- Remote pairing and remote antenna available as optional extras
